

Week 7: Tableau Assignment

Start Assignment

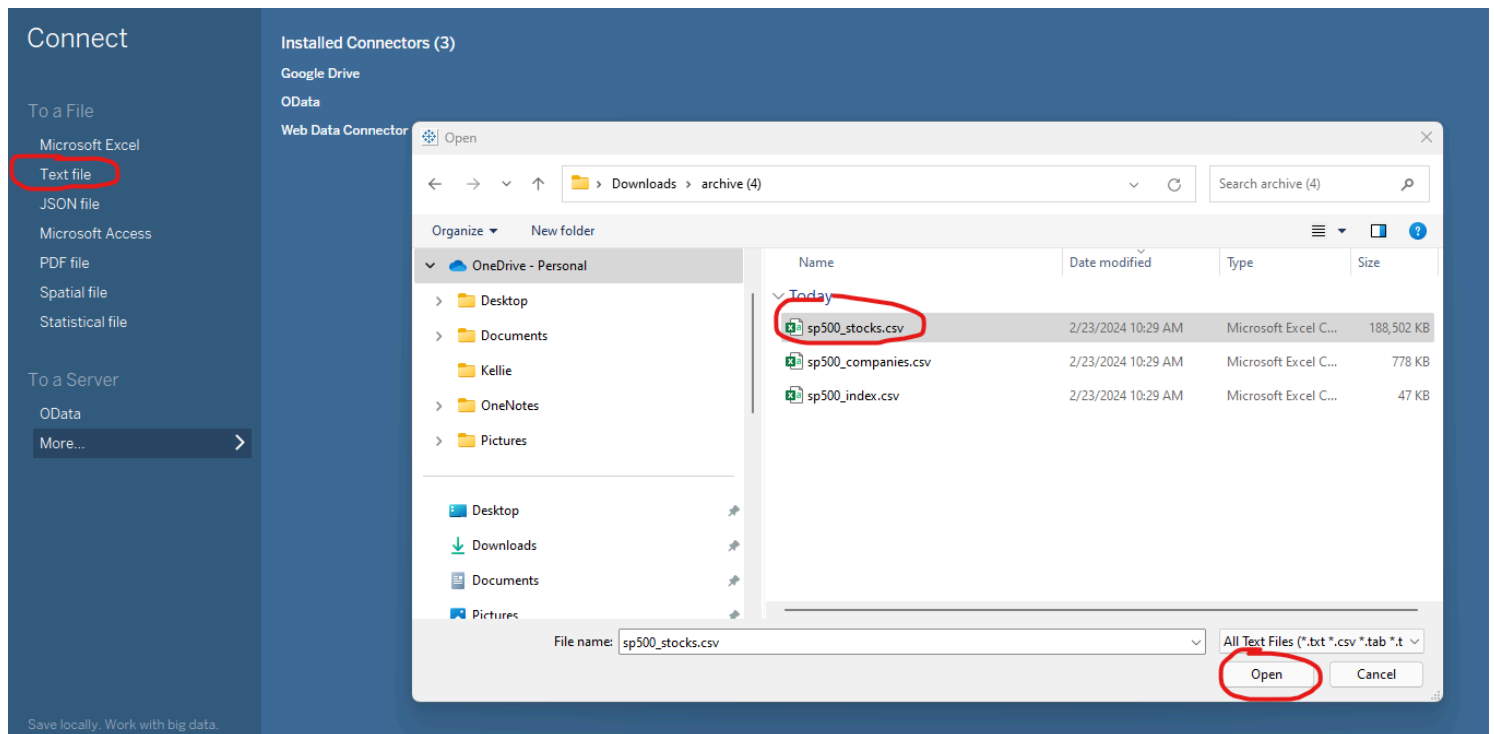

- Due May 17 by 11:59pm
- Points 10
- Submitting a file upload
- File Types twbx

Remember back to Week 2, you installed Tableau ([Week 2: Textbook Reading & Software Install \(https://shoreline.instructure.com/courses/2709174/assignments/40073219\)](https://shoreline.instructure.com/courses/2709174/assignments/40073219)). This week we will utilize Tableau for some exploration in the "dimension" world.

Step 1: Download the "S&P 500 Stocks (daily updated)" dataset from this location:

https://www.kaggle.com/datasets/andrewmvd/sp-500-stocks?select=sp500_stocks.csv 
 https://www.kaggle.com/datasets/andrewmvd/sp-500-stocks?select=sp500_stocks.csv

Step 2: Open Tableau, and connect to your S&P file, using the Text file connection option. See screenshot below

For more info on how to get started with Tableau, please watch this intro video:

<https://www.youtube.com/watch?v=6xv1KvCMF1Q>  <https://www.youtube.com/watch?v=6xv1KvCMF1Q>

(<https://www.youtube.com/watch?v=6xv1KvCMF1Q>)

Step 3: Watch this video to familiarize yourself with "dimensions" vs "measures" in Tableau:

<https://www.youtube.com/watch?v=FYe7QwsphrQ> ↗ (<https://www.youtube.com/watch?v=FYe7QwsphrQ>)

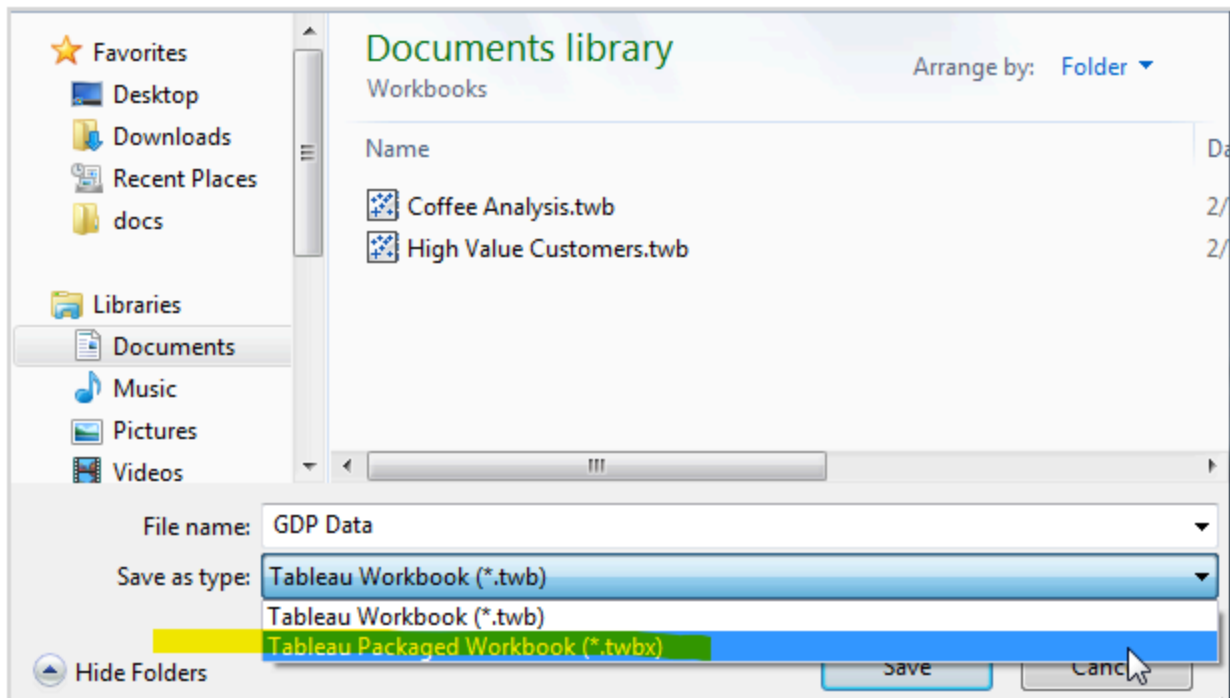

(<https://www.youtube.com/watch?v=FYe7QwsphrQ>)

Step 4: Play with this dataset and **create** some visualizations that show multiple dimensions.

- Feel free to create additional fields with calculations if you want to transform any of the data
- Create **at least 4 visuals (aka 4 Sheets)** - name each sheet something **meaningful**
 - Make sure there are aggregates represented (e.g. sums, mins, maxes, etc.)
 - Make sure labels are present to explain what is shown in any/all axes
 - Make sure you have at least 1 filter per visual - all visuals can share the same filter (just make sure they operate in concert on the dashboard)
 - Choose legends that make sense and are easy to consume
 - In other words - do not choose legends that have more than 10 colors - typically those are too hard to understand easily
- **Create 1 dashboard** to combine all those visuals - name your dashboard something **meaningful**
- Make sure the data displayed is understandable
 - Give your dashboard a title and any other text to make it make sense

Step 5: Save your Tableau workbook to your local machine as a **twbx file type** (aka Tableau packaged workbook)

Step 6: Upload your Tableau workbook here to this assignment
